INTRODUCTION

What Are Roman Galleys?

Welcome, Warrior!

Roman Galleys is an arcade game where you become the captain of a Roman galley and travel the waters of the ancient world. Your goal is to dodge rocks, collect gold, ram enemy ships, and reach the end of your journey.

The game is inspired by the real history of the Roman Empire, when its fleet dominated the Mediterranean Sea, and galleys were the primary weapon of the legions on water.

Historical Note: The Roman Fleet

The Romans were not always a naval power. The first real war fleet was created during the First Punic War (264-241 BC) against Carthage. Legend has it that the Romans captured a Carthaginian ship and built 120 quinqueremes from its design!

A quinquereme was a five-oared warship with a ram. The crew numbered up to 300, of whom 200 were rowers. The ram was the primary weapon - it was used to pierce the hulls of enemy ships to destroy or disable them.

In the game, you use exactly this kind of ram - press SPACE to attack!

2

CONTROLS

Galley Control Basics

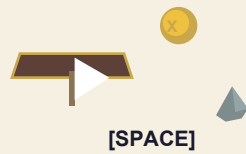

Controls

Movement: A/D or Left/Right arrows

Ram: SPACE (cooldown ~1 second)

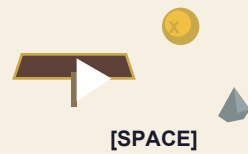

Your galley automatically sails down the river - you must dodge obstacles.

Interface

At the bottom of the screen: health bar (red circles), ram recharge indicator, and current level progress bar.

In the top right corner: current score and level name.

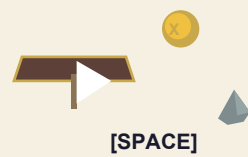

Tips for Beginners

Don't stand still - the river carries you forward!

The ram is effective against enemies, but you must wait for recharge after hitting.

Gold coins give points - collect them when it's safe.

On each new level the speed increases - stay alert!

3

WORLD

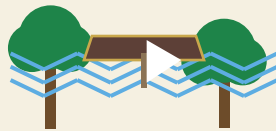

The Tiber River and Beyond

The Mediterranean Sea

The first level - calm turquoise waters. Here you'll learn the controls. Seaweed and coral line the shores - dangers are minimal.

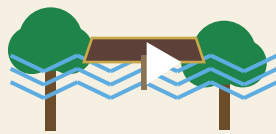

Historical Note: The Mediterranean Sea (Mare Nostrum - Our Sea) was the center of the Roman Empire. All major trade and military routes passed through it.

The Banks of the Tiber

The second level brings you to the Tiber River, near the capital of the empire. Green banks show ruins of ancient temples and shrubbery.

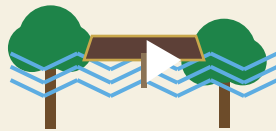

Historical Note: The Tiber (Tiberis) is Rome's main river, 405 km long. Legend says the founders of Rome - Romulus and Remus - were thrown into the Tiber, but a she-wolf found and nursed them on the riverbanks.

The Harbor of Ostia

The third level - a trading harbor. Docks, barrels, crates - lots of coins here, but enemies grow smarter too.

Historical Note: Ostia was Rome's main port, founded in the 4th century BC. Grain, wine, and goods from across the Mediterranean flowed through Ostia to Rome.

4

SCORING

Progress and Levels

Earning Points

Coin = 10 points

Destroying an enemy = 25 points

The more points, the faster the game!

Level System

The game has 7 levels. To advance, you must earn a certain number of points:

Lv.1: 80 pts > Lv.2: 200 > Lv.3: 350 > Lv.4: 520 > Lv.5: 700 > Lv.6: 900 > Final

When advancing to a new level, you get temporary invincibility and a unique level introduction animation.

Enemies

On each level enemies get stronger - they have more health. On the first level one ram hit is enough, but on the last you need three.

5

THE RAM

The Galley's Primary Weapon

How to Use

Press SPACE to activate the ram. Your galley momentarily accelerates and strikes the enemy ship.

After the hit you need to recharge - the indicator at the bottom shows when you can ram again.

Historical Note

The ram (rostrum) was attached to the bow and was a bronze tip shaped like a beak. The most powerful rams weighed up to 200 kg!

In the Battle of Ecnomus (256 BC), the Roman fleet sank 16 Carthaginian ships using only ram attacks. The Romans were the first to turn naval combat into ramming collisions.

Strategy

Don't ram every ship you see - wait for the enemy to get close enough. The ram can only hit one enemy at a time!

During cooldown, dodge enemies - you're vulnerable.

6

OBSTACLES

Rocks, Enemies, Coins

Rocks

Gray rocks are the most common obstacles. They deal damage on collision. Rocks cannot be destroyed - only dodged!

Rock sizes vary from small pebbles to large boulders.

Enemy Ships

Red ships are enemy boats. They move towards you. Use the ram to destroy them!

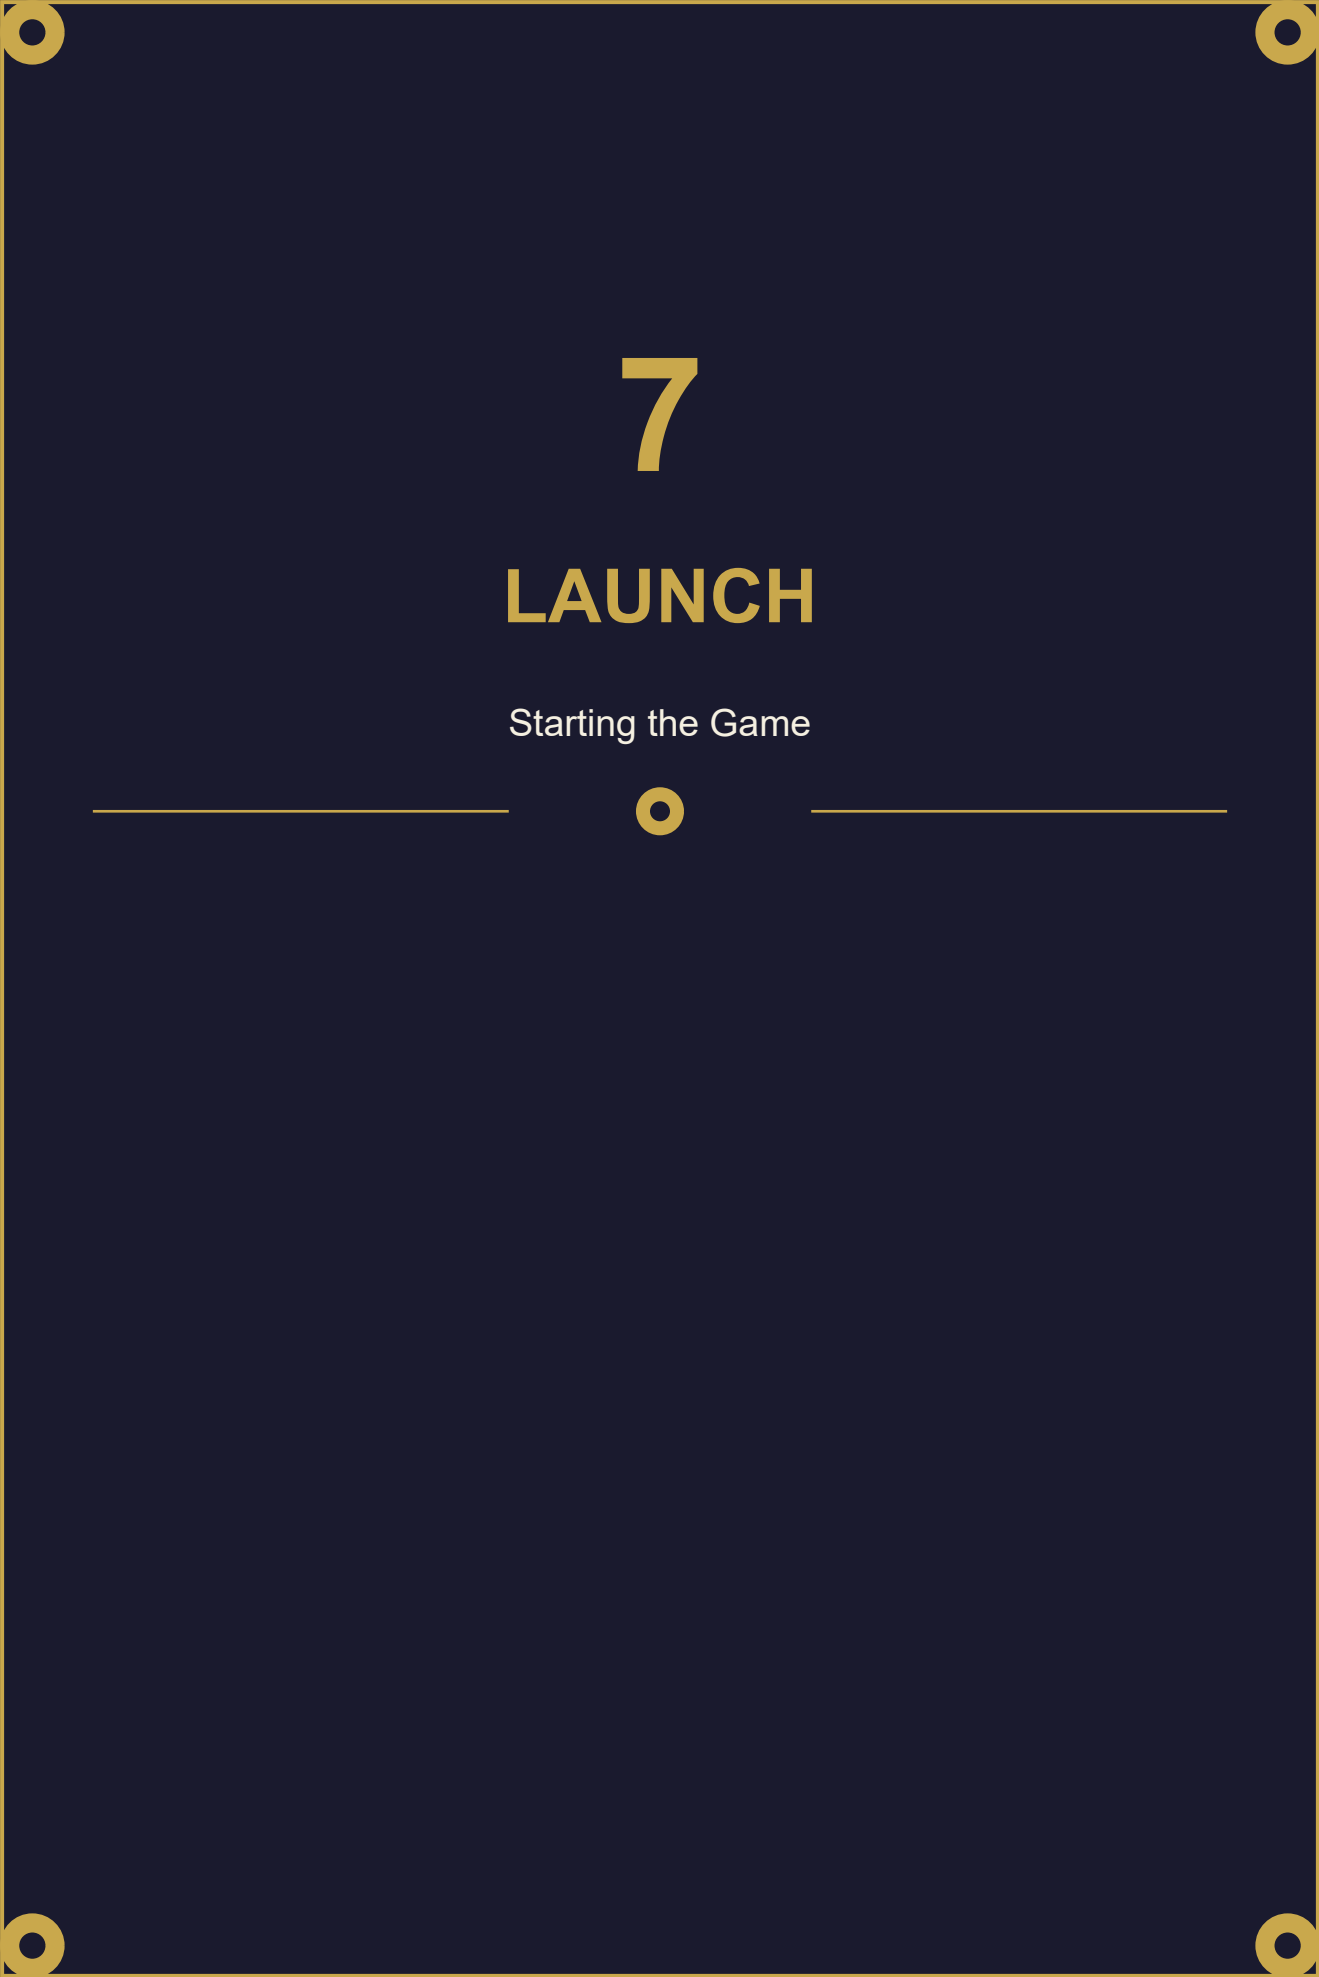

Enemies appear more frequently at higher levels and have more health.

Gold Coins

Coins glow gold and pulse. Collect them for points! Coins deal no damage - they're safe loot.

Four yellow circles are positioned at the corners of the page, serving as decorative elements.

7

LAUNCH

Starting the Game

Simple Launch

1. Open the file roman-boats.html in any modern browser.
2. A title screen with a 'BATTLE!' button will appear.
3. Click the button or press ENTER.
4. The first level begins - The Clean Sea!
